

Employment history

2014–2018	Lecturer Department of Physics and Astronomy Middle Tennessee State University Murfreesboro, Tennessee
2011, 2013	Adjunct professor of astronomy and physics Department of Physics, Computer Science, and Engineering Christopher Newport University Newport News, Virginia
2009–2013	Postdoctoral researcher Employed by University of Manitoba, Winnipeg Located at and partially funded by Thomas Jefferson National Accelerator Laboratory, Newport News, Virginia
2002–2009	Graduate research assistant University of Tennessee, Knoxville
2001–2003	Graduate teaching assistant University of Tennessee, Knoxville

Education

2009	Doctor of philosophy University of Tennessee, Knoxville Major in physics Dissertation: “Parity violation in polarized cold neutron capture”
2001	Bachelor of science, <i>summa cum laude</i> University of Tennessee, Knoxville Major in physics; minors in astronomy and mathematics

Research experience

2009–present	Measurement of the proton’s “weak charge” The proton’s familiar electric charge controls its coupling to the electromagnetic field and to the photon. In addition, the proton has a weak charge which governs its exchanges with the Z^0 boson, whose value is sensitive to unknown short-range forces. The Qweak collaboration has performed the first-ever measurement of this quantity by precisely measuring an asymmetry in the scattering of polarized electrons from hydrogen. I was responsible for the construction and operation of the Cherenkov electron detector array and was heavily involved in data collection and analysis.
--------------	---

Relevant publications: 1, 5–6

2003–present | **Weak neutral currents in proton-neutron capture**

The NPDGamma experiment has measured the parity-violating asymmetry in the distribution of photons from the capture of polarized neutrons on protons; this asymmetry probes the weak nucleon-nucleon interaction. I contributed to the construction and operation of the experiment at Los Alamos National Laboratory; to the analysis of the data obtained there; to the redesign and relocation of the experiment to Oak Ridge National Laboratory; and to the operation of the experiment's second run at Oak Ridge.

Relevant publications: dissertation; publications 2, 4, 7–15.

2003–2009 | **Neutron transport simulations**

Neutron beams are typically transported in guides, where neutrons propagate by lossy geometric optics. I performed and contributed to design simulations for proposed neutron beamlines at ORNL's High Flux Isotope Reactor and Spallation Neutron Source. I also performed measurements and accompanying simulations to characterize the installed neutron guides at Flight Path 12 at the Los Alamos Neutron Science Center and the Fundamental Neutron Physics Beamline at Oak Ridge.

Relevant publications: 3, 4, 13, 16–17.

2002–2005 | **Neutron beta decay experiments at SNS**

Beginning after 2015 the Spallation Neutron Source will house a spectrometer for measuring several angular correlations among the products of neutron beta decay; these correlations are sensitive to the relative strengths of the vector and axial vector weak couplings. I contributed to the preliminary design of the abBA spectrometer, including development for the combined electron-proton segmented detector and an implementation of an efficient algorithm for modeling charged particle transport in strong combined electric and magnetic fields.

Relevant publication: Desai et al. 2004

Technical skills

- **Numerical analysis** using Python / Numpy / Matplotlib; ROOT / C++; GNU Octave; Gnuplot; Matlab; MS Excel and workalike spreadsheets; SQL to store and access moderate-sized datasets (1M–100M records).
- **Computer automation and scripting** using Unix shells (sh / bash on Linux, MacOS, Cygwin); Perl; Python; C / C++; Emacs Lisp. Code revision control via Git or Subversion. Administration of small Unix / Linux farms.
- **General laboratory skills** including vacuum systems; cryogenic systems; temperature monitoring and control; low- and high-voltage power distribution; designing, prototyping, and troubleshooting of analog and digital circuits; computerized data acquisition; radiological monitoring and shielding; lasers and optics; engineered and administrative safety systems.
- **Particle detectors and associated techniques:** Photodiodes / photomultipliers, bare or coupled to radiators or scintillators. Gas ion chambers. Semiconductor detectors.

High-gain, high-speed amplification for single-particle counting; moderate-gain, low-noise amplification for continuous, high-precision measurements at high rates. Fast, modular digital logic (NIM / CAMAC / VME). Oscilloscope wizardry. Communication and control via Ethernet, RS232, etc.

Awards, Honors, and Affiliations

I am a member in good standing of

- Phi Beta Kappa
- Sigma Pi Sigma
- American Physical Society
- American Association of Physics Teachers
- American Association for the Advancement of Science

I am especially proud of the following:

2014–2017	Board of Directors, Barnard-Seyfert Astronomical Society
2007–2009	Research fellow, UT/ORNL Joint Institute for Neutron Science
2000–2003	Research fellow, UT/ORNL Science Alliance.
2001	Douglas V. Roseberry Award: Distinguished Upper Class Physics Major University Citation for Extraordinary Academic Achievement University Citation for Extraordinary Professional Promise
1997	Bicentennial Scholar
2014–present	Nashville Symphony Chorus
1993	Distinguished West Virginian
