

Common Date Rape Drugs
Bulletin Board Kit Instructions

1. Glue or tape together the four sections of the banner. These sections can be trimmed if desired.
2. Cut out the individual photos of each drug. Staple or tape the drugs to their respective information sheet.
3. A suggestion for the bulletin board look is below.

Have You

Seen These

Common Date

Rape Drugs?

WANTED

ALCOHOL

ALIASES:

Liquor, Beer, Wine, Booze

DESCRIPTION:

Alcohol is found in many beverages. Its odor and taste are strong and usually detectable.

CAUTION:

Alcohol is a depressant. Its effects may cause you to lose your inhibition and lose control of yourself and your actions. It can have very different effects on different people. It is extremely dangerous when consumed in large amounts or combined with other drugs. Alcohol hinders one's ability to give sexual consent and it is the most common drug associated with rape.

WANTED

KETAMINE

ALIASES:

Special K, Jet, K, Green, Purple, Mauve, Super Acid, Super C, Vitamin K

DESCRIPTION:

Ketamine is a general anesthetic used in human and veterinary medicine. It is produced in liquid form that is available as an injectable prescription drug. It may also be administered orally or in the form of a white powder that is often snorted or smoked.

CAUTION:

Ketamine is capable of producing intense hallucinations, vivid dreams, and an increased sex drive. After ingesting, victims first notice dissociation from their body. Other symptoms include dizziness, mouth watering, disorientation, seizures, unconsciousness, and/or cardiac arrest.

WANTED

GAMMA HYDROXY BUTYRATE

ALIASES:

GHB, Grievous Bodily Harm, Liquid X, Liquid E, Liquid Ecstasy, Easy Lay, G

DESCRIPTION:

GHB is a colorless, odorless liquid with a slightly salty or soapy taste that is easily masked when mixed with other drinks. May also be found in white crystalline powder form.

CAUTION:

GHB is a very powerful depressant. Its effects are rapid and may occur within 15 minutes of ingestion. Initial symptoms may include drowsiness, confusion, dizziness, & loss of consciousness. Other symptoms include nausea, vomiting, or memory loss. GHB is potentially lethal if consumed in high doses with alcohol or other drugs.

WANTED

ROHYPNOL

ALIASES:

Roofies, Ruffies, Roaches, Forget Pills, R-2s, Mind-erasers, Circles, Flunitrazepam

DESCRIPTION:

Rohypnol was originally found in white tablet form with the word "ROCHE" scored on one side. It is usually tasteless and odorless, and easily dissolves in liquid. Because of its link to rape, it is now manufactured in blue tablet form.

CAUTION:

Rohypnol is a fast-acting and potent sedative. The physical effects can occur within 20-30 minutes. The drug may cause drowsiness, dizziness, confusion, lack of coordination, slurred speech, loss of consciousness or memory impairment. When mixed with alcohol, Rohypnol can become lethal.

Reduce Your Risk

- Always monitor how your drink is being prepared.
- Don't drink from a punch bowl.
- Don't accept drinks from an open container.
- Don't leave your drink unattended.
- Don't share or exchange drinks.
- Accept drinks only from the bartender, waiter or waitress.
- Don't take beverages from someone you don't know well or trust.

What To Do If It Happens To You or Someone you know

- Try to remain calm and alert.
- Go to a safe place
- Get medical care, if needed.
- Go to a hospital emergency department as soon as possible for an examination and evidence collection.
- Request that the hospital take a urine sample for drug toxicology testing to be done by your law enforcement agency's crime lab. A special test must be conducted to detect Rohypnol in a urine specimen.
- Preserve as much physical evidence as possible. Do not urinate, shower, bathe, douche, or throw away the clothing you were wearing during the incident. If possible, save other materials that might provide evidence, such as the glass that held your drink.
- Call your local rape crisis center for more information and support [add number here]
