MTSU Online

Examity Levels

Authentication

- Auto ID – proprietary technology is coupled with other actors to validate test-takers identity
- Mobile ID – employs smartphone technology to authenticate a test-takers identity; this approach to ID verification uses fingerprint, face, and voice biometrics
- Live ID – the team confirms a test-taker's identity, reviews the exam rules and inspects test environment prior to beginning test

Automated Proctoring

- Auto Standard – after confirming test-takers identity, Examity software takes over to capture behavior during exams using algorithms to detect potential violations; any questionable behavior is captured via screenshots, audio files, and video
- Auto Premium – same as above but adds the element of a human auditor to further review the proctored session
