

How to Convert Photos to PDF on iPhone and iPad

When taking a photo for class, make sure the lighting is good and your photo is clear and legible.

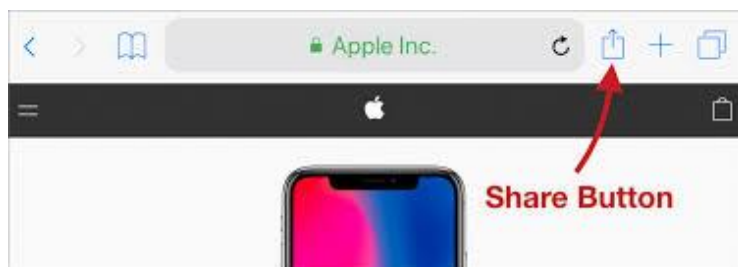

You will need to download the Brightspace Pulse App for D2L.

1. Launch **Photos** app on your iOS device. Then, select the photo you wish to convert to PDF.

Note: If you want to convert multiple photos into PDF format, tap on Select at the top right corner and then choose the pics.

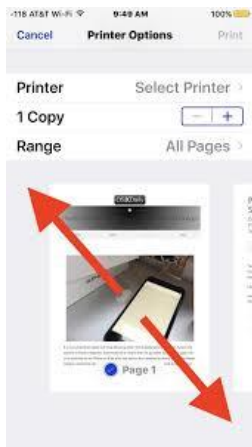

2. Tap on the **Sharing** button.

3. Next, select **“Print”** in the action menu.

4. Next up, you have to use the spreading gesture with two fingers on the photo preview to transform the pic into **PDF**.

Alternately, you can also use the 3D Touch gesture to change the photo to PDF.

5. Up next, you can **share the converted photo as PDF** via Message, Mail or another app.

There is also an option to Save the converted photo to Files app. Select the preferred option depending on your need. Tap on Save to Files and then select the desired location.
